

Hutt Valley (Lower Hutt, New Zealand) — Flood Hazard Zones

Flood Hazard (HAND proxy)

Flood Hazard Zones

- Band 1 (Gray)
- Very High (HAND 0-2m)
- High (HAND 2-5m)
- Moderate (HAND 5-10m)
- Low (HAND >10m)

Source: LINZ open LiDAR (Hutt City 2021, 1m), resampled to 5m. Method: D8 flow accumulation -> HAND (Height Above Nearest Drainage), 1 km² stream threshold. Validated against OpenStreetMap's Hutt River centerline: median offset 21.2m, 80.8% of the real river within 100m of the derived network. Relative hazard is a proxy, not a calibrated hydraulic model or an official regulatory flood extent.
